

ARUM LILY BLITZ

Undertaking your own arum lily spraying?

If you plan to undertake arum lily spraying yourself we can help by providing **FREE** herbicide and instructions on how to spray.

The herbicide chlorsulfuron is highly effective at killing arum lily plants and should be applied when the plant is actively growing between July and October. The ideal window of time is when about 50-70% of the flowers are present.

Please note that Roundup (glyphosphate) is ineffective at killing arum lilies.

Free herbicide and instructions can be collected at the following locations and times. Contact Genevieve Hanran-Smith on 9757 2202 or genevieve.hanransmith@natureconservation.org.au for more information.

Location	Time
Nature Conservation office, Community Resource Centre, 33 Tunbridge St, Margaret River	Tuesday to Thursday from July to November 9 am to 5 pm
Nature Conservation office, Community Resource Centre, 33 Tunbridge St, Margaret River	Saturday 31 st July 9.30 am to 11.30 am
Nature Conservation office, Community Resource Centre, 33 Tunbridge St, Margaret River	Saturday 28 th August 9.30 am to 11.30 am
If none of the above times suit you to collect herbicide from the Nature Conservation office please get in contact and we can work out another arrangement.
